

# Release Notes

## for Kerio MailServer 6.6.1

© Kerio Technologies. All rights reserved.

November 20, 2008

### 1 New features

#### ***New Web Administration***

Completely redesigned version (old version still available). Added support for *Mailing Lists* and *Resource Scheduling*.

#### ***Support for iPhone 3G, 2.0 and iPod Touch***

Added support for e-mail, contact and calendar over-the-air synchronization with *Apple iPhone 3G* and *2.0*. The support includes e-mail push and remote device wipe feature.

#### ***Enhanced Apple iCal integration***

*Apple iCal* integration with *Kerio MailServer* has been enhanced. Now, there is working address and location autocomplete, delegation support and availability feature.

#### ***Ability to automatically delete old e-mails***

Added ability to automatically delete old e-mails from *Junk E-mail* and *Deleted Items* folders on the server. The feature is configurable both per-domain and per-user.

#### ***Tool for creating Outlook Connector's profiles from script***

Command line tool for automatic creation of new profiles. Useful for massive deployment using *Microsoft Windows Domain Policies*.

#### ***Support of ActiveSync 12 (Windows Mobile 6)***

Added support for the new *ActiveSync* protocol used on *Windows Mobile 6* devices (*Exchange 2007* compatible). Includes support for reading HTML e-mails, fast message retrieval, enhanced e-mail search and out-of-office setting on mobile devices.

### ***Resource Scheduling***

For planning of meetings with shared resources such as rooms, equipments, cars, etc. The resources can be managed in the *Web Administration* and/or in the *Administration Console*.

### ***Integration Page***

A web page with useful links. Available through *WebMail*.

## **2 Changes in System Requirements**

### ***Further unsupported***

- *Fedora Core 4-6*
- *Red Hat Enterprise Linux 3*
- Browsers: *Safari 1.3, Firefox 1.5*
- *Entourage X*
- *Outlook 2003 SP2* — *Kerio Outlook Connector (Offline Edition)* requires *SP3* on *Outlook 2003*

### ***Changed requirements***

- *Windows 2000* — *Microsoft .NET Framework 1.1* or higher is required (available through the *Windows Update* service)

### ***New supported platforms***

- *Windows Server 2008 (Longhorn) 32-bit*
- *CentOS Linux 5.2*
- *Firefox 3*

### ***Discontinued products***

- *Kerio Synchronization Plug-in (KSP)*

## **3 Kerio MailServer**

### ***Upgrade***

- For enjoying all improvements of *ActiveSync* protocol on *Windows Mobile 6* devices the device will be fully re-synchronized with the server after upgrade.

### ***Downgrade to previous version***

- Newly registered *Windows Mobile 6* devices (and other mobile devices using *ActiveSync 12* protocol) will stop synchronizing after server downgrade to any previous version. To solve this issue open the *Administration Console* and remove registered mobile device from the user preferences.
- *CalDAV* database with *iCal* access rights will be re-created after the downgrade. *iCal* users may experience temporary difficulties with permissions and delegation rights in *iCal* during database re-build process.
- Downgrading to any older version than *Kerio MailServer 6.5.2* will cause *iPhone 3G* and *2.0* to stop synchronizing as this device is not supported in old versions.

## **4 New Web Administration**

### ***Supported browsers***

- *Internet Explorer 7*
- *Firefox 2, 3*
- *Safari 3*

The new *Web Administration* doesn't support *Internet Explorer 6* and *Safari 2*.

## **5 Known issues**

- *Kerio MailServer 6.6.0* does not support *RoadSync 4*.
